83	2570	RR	1/7/2009	tw	Cunningham	2225	5 - 160	83	0.98	167	Real sound spring ram

This is the production and performance data for the rams we have consigned to the Hettinger ram sale. We hope it is useful to you. Weaning percent is one of our primary culling considerations. We both have "town jobs" and our ewes often go 12+ hours during lambing without being checked so mothering ability is very important to us. The rams spent the summer on pasture and have been grown out to maintain soundness and longevity, not maximum gain. If you can't make the sale and are interested in a ram we can help direct you toward a mail bid handler and assist in setting up transportation.
