

## 2004 KHSI Annual Gathering Schedule

Thursday, October 7

Board of Directors meeting @ Hawthorn Inn. Thursday trip to New Orleans Natchez. New Orleans of course is well known but Natchez is a bit closer. Natchez is well known for its Antebellum homes and sense of the Deep South. Those wanting to visit and see Mississippi, Natchez would be excellent. Jordan needs advance notice of those who would like to go. To make it a tour would need to have 10 or 15 reservations. Both trips would be fun. The cost would be about \$25 per head for transportation, and you can enjoy the ride without worrying about directions or driving.

Friday, October 8

break

Dr. Jim Morgan, <sup>3</sup> Speedbumps on the Road of Genetic Progress: How to miss those bumps. 10:00 am

Dr. Charles Parker, <sup>3</sup> What I See Retired Ohio State University Professor, Department Chair of Animal Science, US Sheep Seedstock Alliance, and Director of the US Sheep Experiment Station in Dubois, PA. 10:00 am

Lunch

Dr. Jim Miller, LS, Veterinary School speaking on Smart Drenching. 1:30 pm

break

Dr. Nix, Sweetlix Company speaking on Ruminant Digestion and Nutrition. 2:45 pm

break

Dr. Jim Miller, LS, Veterinary School speaking on Training and Sheep Care. 4:00 pm

Catfish and Ribs & Music. 7:00 pm

Saturday, October 9

Halal Ethnic Processing Plant Tour (close to hotel) to be arranged (if interested, please put check mark on registration sheet)

Vendor Presentations. 8:00 am

Mark Dennis, <sup>3</sup> Demo on Taking Excellent Sheep. 8:30 am

break

KHSI Inspector Training. 9:15-11:15 am

Lunch

KHSI Annual Meeting. 1:30-3:30 pm

Private Treaty Sales. 3:30 pm

Lamb Cook off/Banquet, Ram Raffle, Music. 5:30 pm

**Register for the Annual Meeting!**

# Creep Grazing Lambs Using Permanent Rotations

In most set-stocked pastures, the ewes have long ago eaten all the tender forbs and clover leaves preferred by the lambs. The young lambs play or lay around and rarely do more than exercise their mouth musculature by mouthing a stem or a tough leaf.

In cattle herds, graziers can creep graze calves by raising the single polywire strand of electric fence a little higher or by building creep grazing gates between permanent paddocks. However sheep are a little trickier than that. Ewes are harder to creep in.

Some graziers have developed creep grazing gates so that lambs can go through to higher quality pastures. At younger ages less than 4-weeks of age, creep grazing gates are not as successful since lambs will not venture

that far from the ewe, but the lambs learn what plants to eat from their dams and consequently it is hard to develop a creep gate and temporary fencing that prevents the ewes from following the lambs into the new pasture. Ewes will want to go through that fence to follow the lambs and will often find ways - even if it means getting shocked. Creep gates that allow lambs to venture into the next permanent paddock at older ages have been successful at increasing rate of gains in lambs e.g. Bulletin 909, June 1987, West Virginia Agricultural and Forestry Experiment Station [www.caf.wvu.edu/a\\_forage\\_library/forglvt/bulletins/s909.pdf](http://www.caf.wvu.edu/a_forage_library/forglvt/bulletins/s909.pdf)

So the question is - how does

FR L RG SD 45

Smilax and some brambles block berries Rubus before they really start grazing grass. So the major question on early grazing is: How do you allow lambs access to quality without the ewes eating it all?

## Katahdin Hair Sheep Superior Genetic Breeding Stock
